

<https://classic.biblegateway.com> offers many versions of the Word of God in many languages along with commentaries, devotional resources and Bible reading plans. When you open the link, select your default choice of Bible versions and your default language. Then type a single verse reference. The results will open in the version and language you've selected as your default. At the bottom left of the results page there's

a link to view that verse in list form from every version. I use English but I'm guessing it will work the same if your selected language is other than English.

The do have an app and a subscription that offers other features but you can use the website without them.
